PROJECT INTRODUCTION

The City of Big Lake and Sherburne County are undertaking a construction project to improve the roadway and utilities along CSAH 5 (Eagle Lake Road), between Plymouth Avenue and Park Avenue West. The addition of sidewalk and trail will provide a connection between Trunk Highway 10 and Lion's Park. The project includes the reconstruction of the roadway along with drainage and storm sewer improvements, hydrant replacements, concrete curb and gutter, concrete sidewalk, and bituminous trail construction.

PROJECT TIMELINE

Bids were received for the improvements on September 13, 2016. Since the project includes federal funding, the bids are being reviewed by the Minnesota Department of Transportation. Following review of the bids, the project is expected to be awarded to the apparent low bidder, Park Construction Company of Minneapolis, MN.

Based on very preliminary schedule discussions, no work on County Road 5/Eagle Lake Road is expected to occur prior to Spring 2017. Grading associated with the bituminous trail north of Glenwood Avenue may begin this fall. After the bid has been reviewed, additional scheduling details will be available.

PRIVATE UTILITY IMPROVEMENTS

Connexus Energy and Xcel Energy will be relocating power poles throughout the entire project area. This work is expected to begin in spring 2017.

PRIVATE IMPROVEMENTS

Prior to the roadway construction which is anticipated to begin in spring 2017, residents and businesses are asked to please remove all private improvements from within the roadway right-of-way including, but not limited to, landscaping plantings and sprinkler systems prior to construction. All private improvements may be reinstalled after restoration has been completed within the boulevard areas. To help ensure that private improvements are not damaged, please mark any underground improvements so the contractor is aware of their existence prior to digging in the area.

PUBLIC UTILITY IMPROVEMENTS

In the areas where watermain and storm sewer improvements are being installed, there will be excavations down to depths of 9 feet. While this utility work is being completed, temporary water shutoffs will be required. Twenty four hours notice will be provided in advance of the water shut-offs.

County Road 5 Multimodal Improvements

TEMPORARY MAILBOXES

Construction activities will require the temporary relocation of existing mailboxes throughout the project area. The temporary mailbox locations will be determined by the post office. Residents will be notified of the temporary mailbox locations prior to construction. After the temporary mailboxes have been installed and mail is being delivered to them, the contractor will remove the existing mailboxes. All existing mailboxes will be reinstalled prior to completion of the project.

TRAVEL WITHIN PROJECT

Residents are asked to please use caution when traveling through the construction zone and whenever possible use alternate routes to access their homes. Access will be provided to all driveways during the construction project whenever possible. There will be occasions when driveway access to individual residences will be impossible.

GARBAGE AND RECYCLING SERVICES

Since the project will limit access to the streets within the project area, residents are asked to please label their garbage and recycling containers with their house number and street address. Please place your containers curbside on your normally scheduled days. If garbage and recycling services are unable to collect the garbage in front of the residence, the contractor will coordinate the garbage pickup with service providers. House numbers and street addresses are required to ensure that garbage and recycling containers are returned to the appropriate property.

CAUTION:

It is important to remember that the large construction equipment is dangerous and operators are concentrating on the job at hand. Please do not approach the equipment and instruct children to stay away from equipment and construction areas.

Anticipated hours of construction are Monday through Friday and potentially Saturday from 7:00 AM to 7:00 PM. Wooden lath, referred to as construction stakes, will be installed in the boulevard areas along the project. Residents are asked not to disturb the construction stakes and discourage children from removing them and using them as toys. The construction stakes are integral to timely project completion.

CONTACTS

Please contact Jared Voge at 612-756-0326 or one the project contacts listed below to answer any questions or address any project related concerns you may have. Please also contact one of the project representatives listed below for specific construction schedule details.

Thank you for your cooperation during the County Road 5 Multimodal Improvements project.
